

May 8, 2026

The Municipality of Southwest Middlesex has been undertaking several upgrades to the wastewater system within the community of Glencoe. The Victoria Street Sewage Pump Station located at 153 Victoria Street is one project which is currently under construction. Work at the site commenced in early 2026 and it is anticipated that the proposed upgrades to the pump station will be completed in June, with final site restoration to be undertaken shortly thereafter.

The figure below identifies the project area currently under construction.

## 1 Upcoming Bypass Pumping and Notice of Potential for Noise:

The current work at the site includes connection to a new forcemain that was constructed in 2025, and upgrades to the pumping capacity of the station. In order to undertake work within the current station, temporary pumping will be required to allow the contractor to remove the existing pumping system while maintaining wastewater servicing to the area.

As of the week of May 11, 2026, it is anticipated that the temporary pumping system will be installed and operational. The temporary system consists of mobile pumping units that will be located on grade within the pump station site, therefore increased noise levels are anticipated while the system is in operation.

The temporary pumping system is expected to be in service for approximately two weeks. Once the new pumps are installed and commissioned, the temporary system will be removed.

## **2 Working Hours**

The temporary pumping system will consist of a generator with two surface mounted pumps that together will operate based on the rate of incoming flows into the station. The generator will operate at all times, with the pumps operating when required based on the incoming flows and levels in the station. Noise levels may increase slightly when the pumps are running.

## **3 Contact information:**

Should you have any questions or concerns, please do not hesitate to reach out to the Municipality of Southwest Middlesex or to Stantec Consulting Ltd. (engineering consultant) as follows:

Mauro Castrilli, CET  
Manager of Public Works
